

# Financial Economics

## 1 Introduction

LEC, SJTU

2024 Winter

# Lecturer

- Jiajun Jiang 江嘉骏
  - ▶ Associate Professor, Fudan SOE
  - ▶ Ph.D in Finance, PKU
- Research Field: Behavioral Finance, Household Finance, FinTech
- Teaching: Advanced Economics, Financial Risk Management, Probability and Statistics
- Email: [jiangjj@fudan.edu.cn](mailto:jiangjj@fudan.edu.cn)
- Site: <http://www.jiangjj.fun>

# Overview

- Course Schedule
  - ▶ 11:20 - 14:00 Mon - Fri, Dec. 23 - Jan. 10
  - ▶ Office Hour: TBA
- Textbook
  - ▶ Microfoundations of Financial Economics (2006) by Yvan Lengwiler
  - ▶ Financial Economics (1997) by Jürgen Eichberger and Ian R. Harpe
- Course Website
  - ▶ <http://www.jiangjj.fun/teaching/2024-summer-fe>
- TA
  - ▶ CAI Hongting 蔡泓霆

# Grading

- The final grade consists of:

---

Attendance	12%
Problem Sets (x2)	18%
Mid-term	35%
Final	35%

---

# Schedule

<b>Week</b>	<b>Lecture</b>	<b>Readings</b>
Week 1	Introduction / Contingent claim economy	Chapter 2 of Lengwiler (2006)
	Asset economy	Chapter 3 of Lengwiler (2006)
	Asset economy	Chapter 3 of Lengwiler (2006)
	Risky decisions	Chapter 4 of Lengwiler (2006)
	Risky decisions	Chapter 4 of Lengwiler (2006)
Week 2	Portfolio Choices and Asset Pricing	Chapter 2 - 4 of Eichberger and Harper (1997)
	Mid Term	
	Static finance economy	Chapter 5 of Lengwiler (2006)
	Static finance economy	Chapter 5 of Lengwiler (2006)
Week 3	Dynamic finance economy	Chapter 6 of Lengwiler (2006)
	Dynamic finance economy	Chapter 6 of Lengwiler (2006)
	Empirics and the puzzles	Chapter 7 of Lengwiler (2006)
	Adapting the theory	Chapter 8 of Lengwiler (2006)
	Adapting the theory	Chapter 8 of Lengwiler (2006)
	Final	

# About Homework

- We have two homework assignments, mainly based on problem sets from the textbook
- Assignments need to be submitted to the TA in Monday's class on the second and third weeks

# About Mid-term and Final Exam

- Mid-term
  - ▶ 2 hours closed-book exam
  - ▶ Similar to the homework problem
  - ▶ Covering Lecture 1 - 4
  - ▶ December 31st 11:20-13:20
- Final Exam
  - ▶ 2 hours closed-book exam
  - ▶ Covering the whole course
  - ▶ January 10th 11:20-13:20

# What is Financial Economics About?

- **Finance:** How prices are determined in financial markets? How risk and capital is allocated across agents and across the economy?
- Individual agents make decisions about savings and investments with regard to the risk they can bear
- Finance theory is also useful for policy analysis to assess welfare gains and losses
- *Origins of Finance:* Draws on General Equilibrium Theory, Macroeconomics, and Microeconomic theory

# What is General Equilibrium About?

- Describes the behavior of an economy, focusing on the optimal behavior of each member of the set of agents in the economy and looks for a point of mutual compatibility
- Underlying assumptions:
  - ▶ Agents do not interact with each other directly but through anonymous markets on which only prices are posted
  - ▶ Agents are small relative to the market i.e. there is perfect competition
- Such models are called Walrasian in honour of Leon Walras who was the first to formulate such a model
- The economy is in **equilibrium** if
  - ▶ at a certain price, each individual buys or sells the optimal quantities (given his tastes and possibilities) of all commodities
  - ▶ the total supply of each commodity equals the total demand for it

# Modern General Equilibrium Theory

- Modern GE theory-follows Arrow and Debreu (1954)- allows for a large number of goods and diverse preferences of individuals
- Establishes the conditions that guarantee the existence of an equilibrium
- Develops the properties of equilibrium allocations –Welfare Theorems
  - ▶ Welfare Theorems- show that market equilibrium allocations and socially efficient allocations are, under some conditions, equivalent
- Radner (1972) built financial markets into these models, making general equilibrium theory applicable to finance

# Macroeconomic Origins

- Keynesian macro-models do not feature individual agents or dynamics explicitly, focus on interaction between different aggregate variables instead
  - ▶ A general equilibrium model but lacking the individual optimization perspective
- Led to revolution in macroeconomics- to construct dynamic models of aggregate economic fluctuations based on individual decisions together with shocks of some sort (mainly to technology)
- Also led to the models with one agent and one good to get easily computable equilibria (Real Business Cycle model): computable dynamic stochastic general equilibrium (DSGE) models

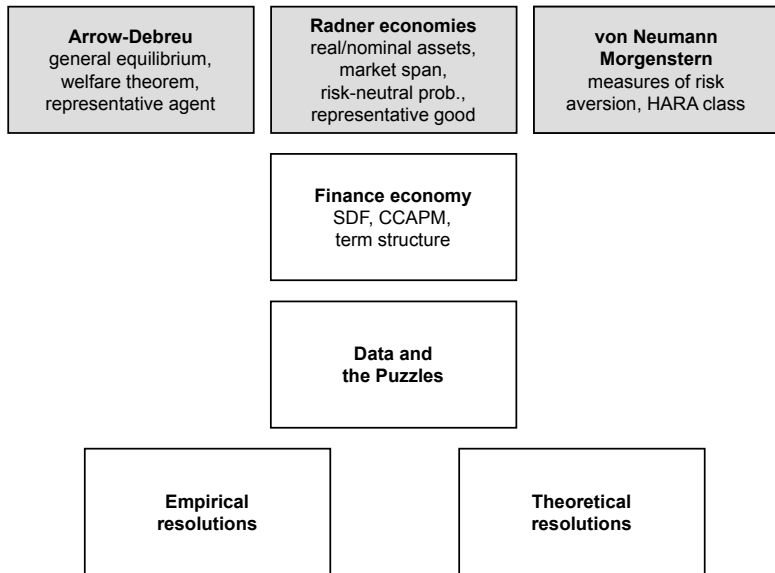

# Origins of Finance

- Finance started as a field of business administration
- Markowitz (1952): Offered a simple decision rule for investing in financial assets (mean-variance optimization)
- Sharpe and others: Emphasis on the determinants of asset prices—showed that only that part of the risk is priced in equilibrium that covaries with the market (e.g. the CAPM)
  - ▶ the market portfolio must be mean–variance efficient
  - ▶ every agent must hold a mixture of the risk-free asset and the market portfolio (*two-fund separation theorem*)

# Macro-Finance

- Traditional GE theory: Describes properties of equilibrium allocations, existence, and efficiency of equilibria
- Macroeconomics: Focuses on time series or dynamical properties of aggregate economic activity
- GE theory focusing on financial assets is equilibrium asset pricing theory
- Stiglitz (1970) connected finance closely with economic theory, later leads to Lucas (1987) tree model and Breeden Consumption-CAPM.
- Finance economy: the combination of Arrow–Debreu–Radner general equilibrium theory and von Neumann–Morgenstern expected utility theory
  - ▶ One-agent, one-good, exchange economy
  - ▶ Equilibrium prices are the focus
  - ▶ Models study how changes of stochastic properties of endowments affect equilibrium prices of different kinds of securities

# Big Picture

# Schedule

<b>Week</b>	<b>Lecture</b>	<b>Readings</b>
Week 1	Introduction / Contingent claim economy	Chapter 2 of Lengwiler (2006)
	Asset economy	Chapter 3 of Lengwiler (2006)
	Asset economy	Chapter 3 of Lengwiler (2006)
	Risky decisions	Chapter 4 of Lengwiler (2006)
	Risky decisions	Chapter 4 of Lengwiler (2006)
Week 2	Portfolio Choices and Asset Pricing	Chapter 2 - 4 of Eichberger and Harper (1997)
	Mid Term	
	Static finance economy	Chapter 5 of Lengwiler (2006)
